

**Name:** Seabrook Nuclear Generating Station

**Owner:** Florida Power and Light

**Location:** Seabrook, New Hampshire, USA

**Products:** PSX 700

**Date:** 2005

In 2005, Florida Power and Light contracted with the Williams Company to recoat the turbine deck at its Seabrook Nuclear Generating Station in Seabrook, NH.

After scarifying the over-100,000 square feet concrete deck, it received a full coat of PPG PMC's patented PSX 700 engineered siloxane. Because of its high-solids content, odor was minimal, no damage/contamination to the charcoal filters was noted and no damage to the pre-exciter brushes was realized.

As can be seen on these photos, at the one-year inspection in March of 2006 the deck was found to be in excellent condition.
