

**Name:** Vessel "Fugro Enterprise"  
**Owner:** Fugro GeoServices, Inc.  
**Builder:** BOCONCO, Incorporated  
**Location:** Bayou La Batre, Alabama, USA  
**Products:** ABC3, Amercoat 235, Amercoat 450H  
**Date:** June, 2007

Fugro GeoServices, Inc. was founded in 1999 as a division of Fugro USA, part of Fugro N.V., a multi-national group of consulting engineers who supply advice, technical applications and drilling operations worldwide. In 2007, Fugro awarded to BOCONCO Incorporated the building of a new survey vessel, to be named the "Fugro Enterprise." This vessel is initially conducting three deepwater surveys in the Gulf of Mexico and carries a suite of high-resolution geophysical survey equipment, including Echo Surveyor II, a Hugin 3000 Autonomous Underwater Vehicle, as the primary system.

First founded in 1997, BOCONCO's offices and shipyard were destroyed by hurricane Katrina in August of 2005 but were completely rebuilt, and the yard delivered its first boat since then in January of 2007. Also in 2007, BOCONCO built the Fugro Enterprise, which was launched on June 1, 2007.

The carbon steel vessel's underwater hull was protected with two coats each of Amercoat 235 multi-purpose epoxy and ABC3 high-performance, tin-free, self-polishing antifouling. The freeboard received two coats of Amercoat 235, and was then topcoated with Amercoat 450H gloss aliphatic polyurethane. These systems will provide the vessel with outstanding weather and antifouling protection.

*Launching of the Fugro Enterprise at BOCONCO shipyard on June 1, 2007*
