

Name: Technology Park Water Tank
Owner: Kent County Water Authority
Location: West Greenwich, Rhode Island, USA
Products: Amercoat 68HS
Amerlock 2
Amerlock 400
Nu-Klad 114A
PSX 700
Date: July, 2007

In June of 2007, the Kent County, RI Water Authority awarded Rockwood Corporation of Syracuse, New York the job of repainting the Technology Park 1.5 million-gallon water storage tank. After abrasive-blasting the carbon steel surface, PPG high-performance coatings were selected to protect the tank.

- The interior pedestal received two coats of Amerlock 400 high-solids epoxy.
- The wet chamber received two coats of Amerlock 2 fast-drying, surface-tolerant, VOC compliant epoxy, then Nu-Klad 114A epoxy pit filler
- The exterior surface of the tank was primed with Amercoat 68HS zinc-rich epoxy primer. A stripe coat of Amerlock 2 was then applied, then topcoated with PPG's patented PSX 700 engineered siloxane, which will give the tank superior weather resistance and corrosion control.
