

Name: Drillship “Discoverer Clear Leader”
Owner: Transocean Offshore International
Location: Busan, Korea
Surface Prep: Abrasive Blast
Products: ABC 3 high-performance, tin-free, self-polishing antifouling
Amercoat 68 zinc-rich epoxy primer
Amercoat 71TC thin-film epoxy primer
Amercoat 229T gloss epoxy acrylic topcoat
Amercoat 240 universal epoxy coating
Amercoat 450H gloss aliphatic polyurethane topcoat
Amercoat 878 silicone coating
Amercoat 5450 alkyd gloss topcoat
Amerlock 400GFA high-solids glass flake epoxy coating
Dimetcote 9 inorganic zinc silicate primer
Date: 2007

Transocean, the world’s largest offshore drilling contractor, provides the most versatile fleet of mobile offshore drilling units to help clients find and develop oil and natural gas reserves.

In 2007, Transocean’s new drillship HN5903/3501, the “Discoverer Clear Leader,” was built by Daewoo Shipbuilding and Marine Engineering (DSME) in Okpo, Geoje Island, Korea. Its carbon steel outside hull, decks, topside modules, ballast tanks, cargo tanks and mud tanks – a total area of 400,000 sq.m. – were protected with PPG high-performance coatings, as will be a second drillship planned for 2008.
